Available executions

Execution No.	Material ID
001	PAAD367865

NOTE
The above executions can be configured using the Engine Configurator.
Detailed guidance for the executions is provided within the Marine Installation Manual (MIM). If a specific execution of interest is not shown in the above table, then it may still be under development or not available. For further information or in case of a project-specific request, WinGD must be contacted directly.

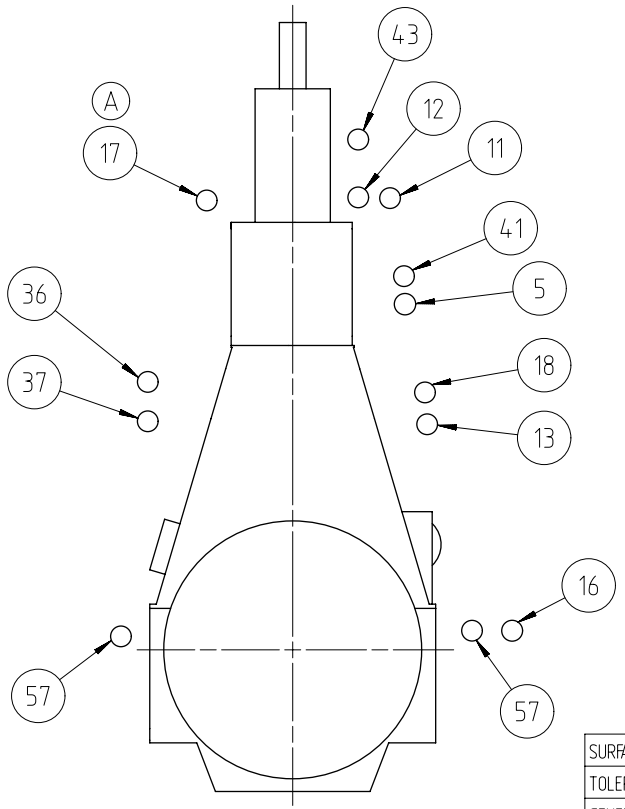
SPECIFICATION which must be met

36	OUTLET - Dirty oil piston underside - Flow with SAC pressure to sludge oil trap or appropriate arrangement - Min. inclination of drain pipe: 15° - Must not be connected to other drain pipes
37	OUTLET - Leakage oil gland box - Gravity flow to sludge tank or appropriate tank
41	OUTLET - Venting crankcase - Venting to funnel - Must not be connected to other venting pipes
43	OUTLET - Venting turbocharger - Venting to funnel - Minimum inclination according to TC suppliers specification - Must not be connected to other venting pipes
57	OUTLET - Various leakages - Gravity flow to sludge tank or appropriate tank



5	OUTLET - Cylinder cooling water drain. - Gravity flow to cooling water drain tank or appropriate tank
11 A	INLET - SAC washing water - Only in use if an optional SAC washing system is installed on the ship side Otherwise blinded with a blind flange - Washing water properties: Fresh water mixed with a chemical washing agent Mixing ratio according to chemical washing agent suppliers specification - Washing water supply pressure: 3 bar - Washing water temperature: 50°C - 60 °C - Washing water pump circulation rate: 3.8 m3/h - Washing water circulation tank capacity: 0.75 m3
12	INLET - Air for turbocharger cleaning - Working air, supply pressure: 7-9 bar
13	OUTLET - Oily water from scavenge air receiver - Gravity flow to oily water tank or appropriate tank
16	OUTLET - SAC condensate water - Gravity flow to bilge water tank or appropriate tank
17 A	OUTLET - SAC washing water - Only in use if an optional SAC washing system is installed on the ship side Otherwise blinded with a blind flange - To chemical washing water circulation tank during SAC cleaning
18	OUTLET - SAC venting - Free flow outside of engine room

	Pos.	SYSTEM COMPONENTS *1)
	001	Sludge oil trap (according to separate drawing)
	002	Throttling disc (size shown on separate sludge oil trap drawing)
	003	Sludge or appropriate tank
	004	Air vent manifold
	005	Gas detector *12)
(A)	006	Chemical washing water circulation tank *14)
(A)	007	Chemical washing water circulation pump
(A)	008	Chemical washing water strainer (0.5-1.0 mm)

	Pos.	ENGINE CONNECTIONS *2)
	(5)	OUTLET - Cylinder cooling water drain
	(11)	INLET - SAC washing water
	(12)	INLET - Air for turbocharger cleaning
	(13)	OUTLET - Oily water from scavenge air receiver *11)
	(16)	OUTLET - SAC condensate water *4) *11)
(A)	(17)	OUTLET - SAC washing water
	(18)	OUTLET - SAC venting *5)
	(36)	OUTLET - Dirty oil piston underside
	(37)	OUTLET - Leakage oil gland box
	(41)	OUTLET - venting crankcase
	(43)	OUTLET - Venting turbocharger
	(57)	OUTLET - Various leakages

	Pos.	ENGINE COMPONENTS *3)
	EC01	Scavenge air cooler washing plant
(A)	EC02	Turbo Charger (TC)
	EC03	Throttling disc
	EC04	Venting Unit
	EC05	Condensate drain unit
(A)	EC06	SAC washing spray nozzle
(A)	EC07	SAC washing isolating valve
(A)	EC08	TC dry cleaning device

Remarks:

- Air vent and drain pipes must be fully functional at all inclination angles of the ship at which the engine must be operational.

(A) *1) To be installed by the shipyard.
*2) Refer to the "Pipe Connection Plan" for the execution and location of the engine pipe connections.
*3) To be delivered by the engine manufacturer, i.e. already equipped on engine side.
*4) The amount of condensate water drained off after the SAC depends on the relative air humidity and the scavenge air temperature before and after the SAC. Under extreme ambient conditions a maximum condensate quantity of up to 0.16 kg/kWh may be produced.
*5) Free flow venting outside of engine room.
*6) Depends on turbocharger type, see table on the left side.
*7) Vent pipe diameter as per turbocharger requirements.
*8) Vent pipe diameter of common collection pipe.
*9) Installed as required (check with the pipe connection plan).
*10) Manifold pipe for 2 TC
*11) Drain connections 13 and 16 include air flow from scavenging air system. It is recommended to connect these drains to different tanks. The tanks must be designed with sufficiently sized vents to avoid excessive pressure in the tanks.
*12) Optional, if requested by the flag state and/or class to achieve IGC compliance.
(A) *13) Switching to the chemical washing water circulation tank must be carried out for SAC cleaning.
(A) *14) Washing water is heated to between 50 and 60 °C by a heating coil.

[mm] [kg] - NX A0 Item ID PAAD367862

Remarks:

*1) Orifice to be as shown

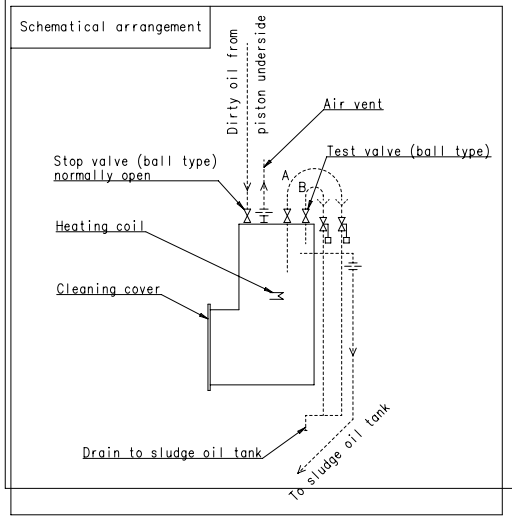
*2) Observe location of pipes with regard to each other

*3) Optional - Alternatives, such as level sensors, are possible

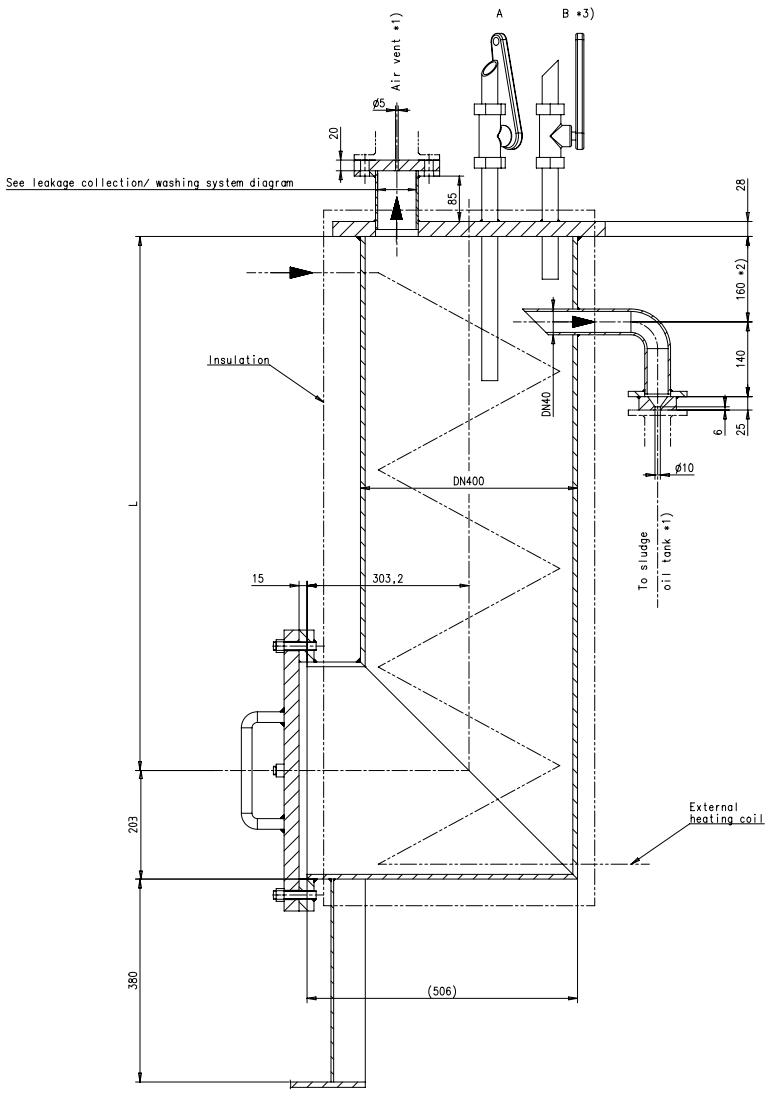
Details:

	L = 1000	L = 550
Cylinder bore size:	55-96	35-54
Capacity:	150 l	100 l
Working pressure:	4 bar	
Testing pressure:	6 bar	
Temperatur:	80°C	

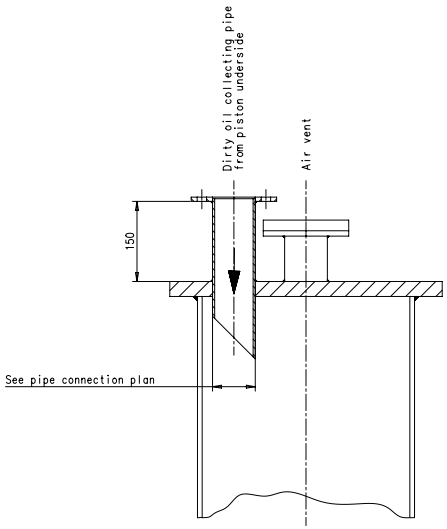
Schematical arrangement

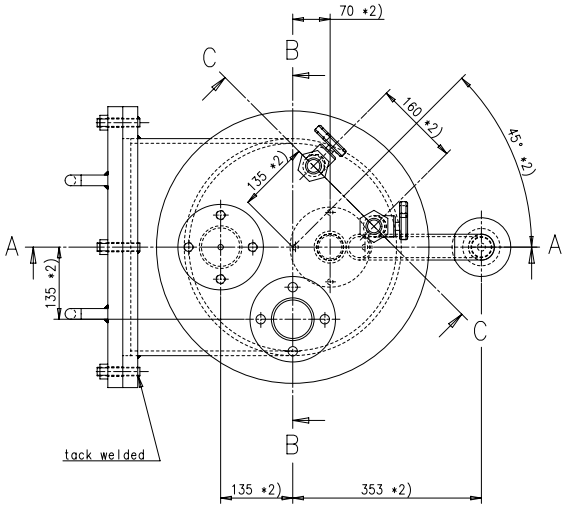


A-A



B-B 90°

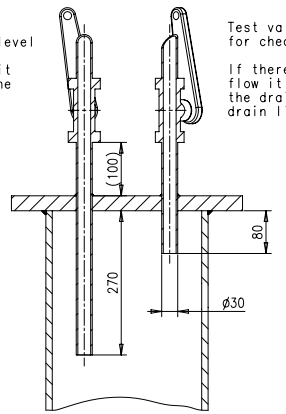




C-C 45°

Ⓓ
Test valve A:
for checking the solids level

If there is no oil flow it is the indication that the solid level is too high. The sludge oil trap must be cleaned.



Ⓓ
Test valve B:
for checking the liquids level

If there is oil instead of air flow it is the indication that the drain line is blocked. The drain line must be cleaned.
