

WINGD Xtra

A smarter perspective on ship power solutions

In this issue of WinGD Xtra we present the most recent steps in our ammonia-fuelled engine development programme. Our latest partnership with AET and ALAM is advancing the new application of ammonia as a zero-carbon shipping fuel including a focus on training to ensure seafarers are also ready.

Continued collaboration with leading ship builders like Mitsubishi Shipbuilding Co., Ltd. will ensure that these engines are delivered ahead of the wide availability of green ammonia, giving operators and crews the time they need to ensure safe and reliable operation.

Finally, we direct our partners to our website where you'll find essential documentation and guidance for WinGD's ammonia- and methanol-fuelled engines – another important step in preparing our partners for successful application of the fuels that will decarbonise shipping.

TECHNOLOGY TALK: AMMONIA

Ammonia engines on track for 2026 vessel delivery

Rapid progress in engine development, collaborations and orders places WinGD in a strong position to deliver X-DF-A engines ahead of wide fuel availability.

X-DF-A
